

Glass roof system

Murano Vetro

# Murano Vetro – glass roof

The perfect retreat from the weather for large patios

## Flush type (B)

with front-facing posts

The posts are in line with the gutter for a compact, modern look.
Rainwater is drained via the rafters, gutter and down the inside of the post.

#### Made to measure with centimetre accuracy

- Width max. 700 cm, depth max. 500 cm
- With 2 to 3 posts (depending on load and type)
- Optional roof pitch: 3° to 20° (stepless)
- Box flush with wall
- Options: LED lighting, radiant heater

The Murano Vetro glass roof provides protection from the weather at any time of the year, thus extending the patio season. The elegant structure can be installed relatively easily on virtually any patio and its generous maximum dimensions make it suitable even for wide expanses. A choice of types and styles is available with posts that are in line with the front profile and positioned laterally flush or inwards.

III. top: **Overhang type with posts positioned laterally inwards** (stule Ü2).

# Overhang type (Ü)

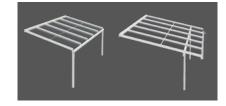

with recessed posts

Here the posts can be positioned on the patio, for example, and the roof overhang extended beyond this. Rainwater is drained via a rain chain of stainless steel (standard) or optionally via downpipes.
